

Bryan Zambrano

Developer by profession and UX Designer by vocation. Throughout my career I have worked in UX design and full-stack development, allowing me to understand user needs and preferences to create attractive user interfaces. With my experience in both areas, I am able to develop high-quality web applications that prioritize user experience and meet business requirements.

Experiencie	
<div>UX Designer</div> <div>Sep 2023 - Jan 2024</div>	<div>Banco Guayaquil</div> <div>I worked within the Digital Transformation area, in charge of the landing redesign process for business services and improving the internal processes of Virtual Banking for Banco Guayaquil companies.</div> <div> Figma</div>
<div>UX Developer</div> <div>Feb 2023 - Sep 2023</div>	<div>CGB Satelital</div> <div>I collaborated in the design and development of a new system called Visual 2, an integration of alert systems, incident registration and maintenance registration and installation of tracking equipment. In order to ensure that the system meets quality and functionality standards, and at the same time intuitive and easy to use.</div> <div> JQuery, EJS, Docker, Axios, Bit Bucket</div>
<div>Full Stack Developer</div> <div>May 2022 - Jan 2023</div>	<div>EPN TECH</div> <div>Work on the PESNOT Project, a secure web platform for the Judiciary Council. My activities ranged from the creation of APIs for the consumption of server-side microservices to the creation of visual components and site layout.</div> <div> Angular, Springboot, GitLab, Jira</div>
<div>UX Designer</div> <div>Apr 2021 - Apr 2022</div>	<div>MitSoft</div> <div>I was in charge of the user interface design process for web and mobile applications. My work was focused on the research and implementation of various user experience and user satisfaction tests, as well as the design of prototypes.</div> <div> Figma, LeanUX, Trello</div>

Freelance Projects

Work for Legio Seguridad, designing a new system for integrating security camera and access control services. At the same time, develop integration services through APIs to connect the system with HikVision devices. Among the new functionalities that I implemented were a virtual logbook and remote device control.

Implemented a data extraction and delivery solution for Sutran in Peru. This service efficiently extracts vehicle information from a database within an organization or fleet. Once the data is extracted, data cleaning is performed to send only essential information to the endpoint, avoiding information overload. The service was developed using JavaScript and Node.js, which guarantees resilience and security.
